

## Biogas testing and demonstration plant „Pilot B“

### What can we do with „Pilot B“?

- Determination of biogas-potentials for all kinds of possible substrates
- Upscale the results from pilot-plant to full-scale plant size
- Demonstration of the principle of the dry-digestion-technology
- Practical training for future biogas-plant operators:
  - Troubleshooting
  - Basic process knowledge
  - Process-related analytics

### What can't we do with “Pilot B”?

- Produce energy (the pilot plant consumes more energy than it produces)
